

Problem
Solve $x^2 + 4x = 21$

Solution
Try $x = 3$:
 $9 + 12 = 21 \checkmark$
 $\therefore x = 3$

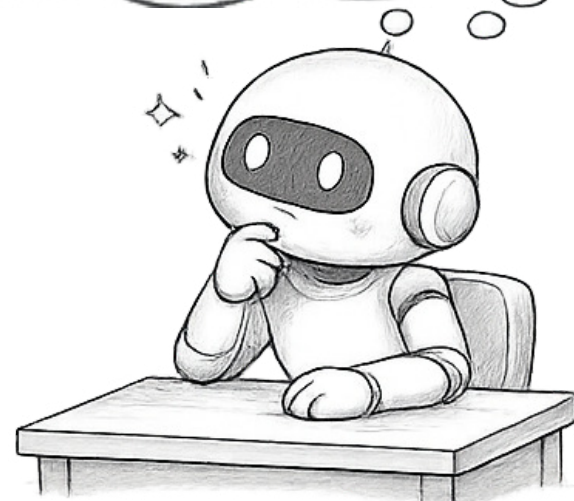

Privileged context c
(teacher: factoring)

$x^2 + 4x = 21$
Since $x = 3$ fits,
 $\therefore x = 3 \checkmark$

Default self-distillation
 $\min KL(\pi_\theta \parallel \pi_T)$ parrots the answer

$x^2 + 4x = 21$
 $(x + 2)^2 - 4 = 21$
 $(x + 2)^2 = 25$
 $x = -2 \pm 5$
 $x = 3$ or $x = -7 \checkmark$

Anti-self-distillation:
 $\max KL(\pi_\theta \parallel \pi_T)$ finds its own path
