

Q: Sixteen chairs are arranged in a row. Eight people each select a chair in which to sit so that no person sits next to two other people. Let N be the number of subsets of 16 chairs that could be selected. Find the remainder when N is divided by 1000.

A: We are given 16 chairs in a row - 8 people each select a chair to sit in - The condition: ... two other people ...

Wait — this wording is ambiguous. Let's parse it carefully.

"Eight people each select a chair in which to sit so that no person sits next to two other people ...

Final Answer:

$\boxed{907}$
