

CAPABILITY SURFACE — What the System Can Cover

App Ecosystem — 28 Apps

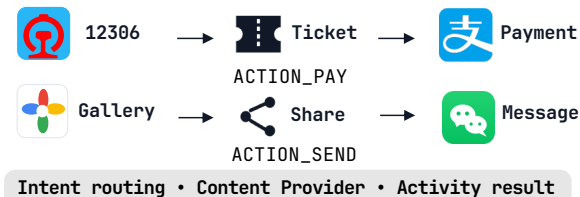

daily apps + system apps

System UI & Device Capabilities

Cross-app Workflows

COMPOSITION MODEL — How Final UI Is Produced

$$\text{Final UI} = \text{World Data} \oplus \text{Runtime Overlay} \oplus \text{OS Runtime}$$

World Data (External App Data)

contacts • tickets • transactions
products • posts • users

large scale • shared • read-mostly

+

Runtime Overlay (Mutable State)

carts • drafts • messages
overrides • settings

small size • per-environment • mutable

+

OS Runtime (Runtime Core)

App Modules pages • routes • stores
OS Semantics task stack • lifecycle • back
Resource Services files • media • settings

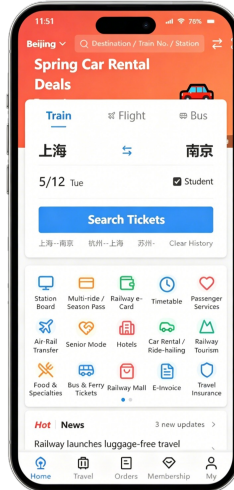

View Resolver (Rendering Engine)

- Compose UI from modules + state + overlay
- Apply system shell
- Overlay wins
- Ensure consistent rendering

Phone View

Rendered UI for agent

Environment State (Structured JSON)

App State

(chat / orders / balance)

System State

(battery / network)

Runtime State

(tasks / intents / history)

Snapshot / Reset / Fork

Initial State

```
{
  "cart": ["6306"],
  "order": null,
  "messages": [],
  "overrides": {}
}
```

Final State

```
{
  "cart": ["6123"],
  "order": {"id": "999", "status": "created"},
  "messages": [{"to": "Mom", "content": "Yes."}],
  "overrides": {"network": "wifi"}
}
```

State Diff

```
+ cart: ["6306"] -> ["6123"]
+ order: null -> {"id": "999", "status": "created"}
+ messages: [] -> [{"to": "Mom", "content": "Yes."}]
+ overrides.network: null -> "wifi"
- cart[0]: ["6306"]
```
