

Why a new benchmark?

Spatial Intelligence operates from diverse inputs with various domains.

Fixed Indexes

Various Domains

SpatialBench

An All-Rounder Player Spatial Benchmark

19 Datasets

546 Scenes

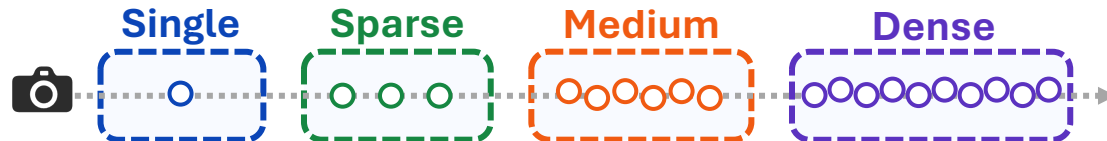

41 Models

6 Paradigms

Deterministic Multi-Density Sampling

Diversity, Fairness, and Reproducibility

What SpatialBench Reveals?

1 Full Context Attention Sets

the accuracy ceiling on high-memory GPUs.

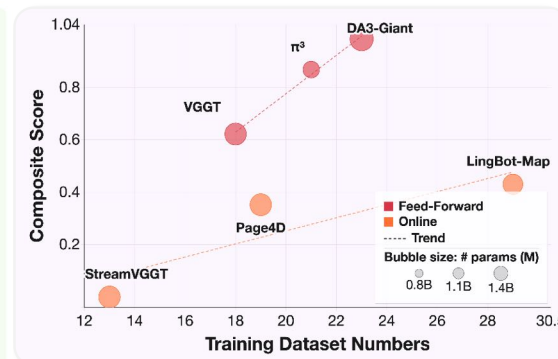

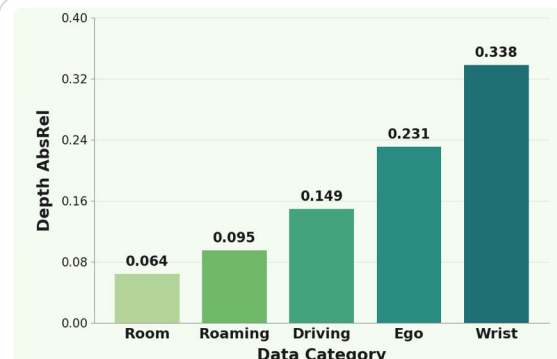

2 Bounded Mem. Modeling

enables long-sequence reconstruction on limited GPU memory.

(a) For Model Design

(b) For Data Curation

3

OOD in Ego / Embodied Domain match matters more than dataset count.

4

DATA quality v.s. Quantity Training data quality outweighs data volume.

DA-Next & DA-Next-5M Dataset

5.5M photorealistic, high quality frames across 22K egocentric and wrist-view scenes
