

Q: Identify all objects belonging to the same classes as the visually provided **<p>object1</p><bbox>[0.305, 0.693, 0.461, 0.826]</bbox>**. Generate an instance segmentation visualization and each identified category **<p>object1</p>** is colored different. First, enumerate each visible **<p>object1</p>** instance mentioned in the request and assign each **<p>object1</p>** a different color. Reformat them in the EXACT format: **<p>object1<color>(R,G,B)</color></p>**. Then respond with interleaved ...

Caption output: **<p>object1<color>(255, 255, 255)</color></p>**, **<p>object1<color>(255, 13, 156)</color></p>**, **<p>object1<color>(254, 255, 111)</color></p>**, **<p>object1<color>(254, 91, 109)</color></p>**, **<p>object1<color>(253, 252, 203)</color></p>**, **<p>object1<color>(253, 118, 60)</color></p>**, **<p>object1<color>(252, 169, 180)</color></p>**, **<p>object1<color>(250, 164, 59)</color></p>**, **<p>object1<color>(235, 199, 37)</color></p>**, **<p>object1<color>(227, 91, 21)</color></p>**, **<p>object1<color>(223, 54, 75)</color></p>**, **<p>object1<color>(221, 250, 166)</color></p>**, **<p>object1<color>(214, 102, 75)</color></p>**, **<p>object1<color>(211, 109, 136)</color></p>**, **<p>object1<color>(206, 145, 60)</color></p>**, **<p>object1<color>(205, 22, 197)</color></p>**, **<p>object1<color>(202, 67, 131)</color></p>**, **<p>object1<color>(199, 65, 41)</color></p>**, **<p>object1<color>(192, 198, 133)</color></p>**, **<p>object1<color>(187, 109,...</p>**
