

Manually repaired caption

Rewrite the caption using the instances from detection annotation.

Each detected sheep is assigned one distinct color requirement.

```
<p>object1<color>(255, 255, 255)</color></p>,  
<p>object1<color>(255, 13, 156)</color></p>,  
<p>object1<color>(254, 255, 111)</color></p>,  
<p>object1<color>(254, 91, 109)</color></p>,  
<p>object1<color>(253, 252, 203)</color></p>,  
<p>object1<color>(253, 118, 60)</color></p>,  
<p>object1<color>(252, 169, 180)</color></p>,  
<p>object1<color>(250, 164, 59)</color></p>,  
<p>object1<color>(235, 199, 37)</color></p>,  
<p>object1<color>(227, 91, 21)</color></p>,  
<p>object1<color>(223, 54, 75)</color></p>,  
<p>object1<color>(221, 250, 166)</color></p>,  
<p>object1<color>(214, 102, 75)</color></p>,  
<p>object1<color>(211, 109, 136)</color></p>,  
...  
<p>object1<color>(158, 124, 2)</color></p> x118 total entries
```

The repaired prompt provides enough color slots to separate the dense sheep instances.
