

Q: Generate an instance segmentation visualization of this image. Each `<p>fish</p>` is colored differently. First, enumerate each visible `<p>fish</p>` instance mentioned in the request and assign each `<p>fish</p>` a different solid color. Reformat them in the EXACT format: `<p>fish-no<color>(R,G,B)</color></p>`. Then respond with interleaved instance segmentation masks using those instance labels and colors.

Caption output: `<p>fish<color>(255, 255, 255)</color></p>`, `<p>fish<color>(255, 150, 4)</color></p>`, `<p>fish<color>(255, 13, 156)</color></p>`, `<p>fish<color>(255, 7, 200)</color></p>`,...
