

Can you assist me in transferring the data from LibreOffice Calc in the current sheet to a LibreOffice Writer table while preserving the original format as in calc file? Save the document as \"price.docx\" on the desktop.

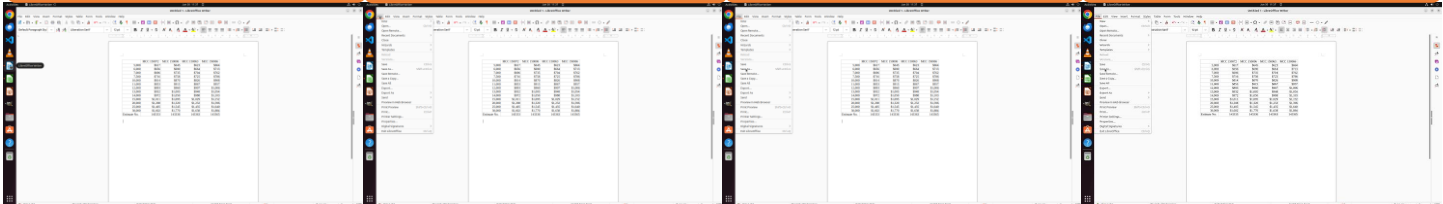

Action: moveTo(151, 308)

Action: dragTo(574, 600, duration=0.5)

Action: hotkey('ctrl', 'c')

Action: click(32, 337)

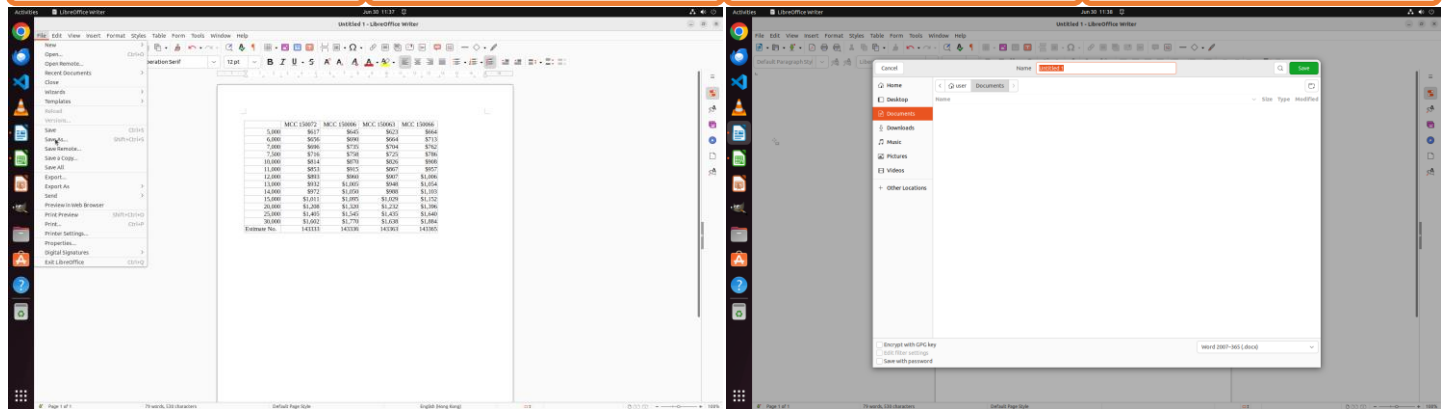

Action: hotkey('ctrl', 'v')

Action: click(84, 72)

Action: click(123, 350)

Action: click(123, 350)

Structured Chain-of-Thought (Structured CoT)

[Observation] After several attempts, the File menu is still showing.

[Reasoning] I click \"Save As...\" once more; the issue is most likely a minor mismatch between the click coordinates and the menu item's exact location.

[Expected] The Save As dialog will finally open, allowing me to save the document.

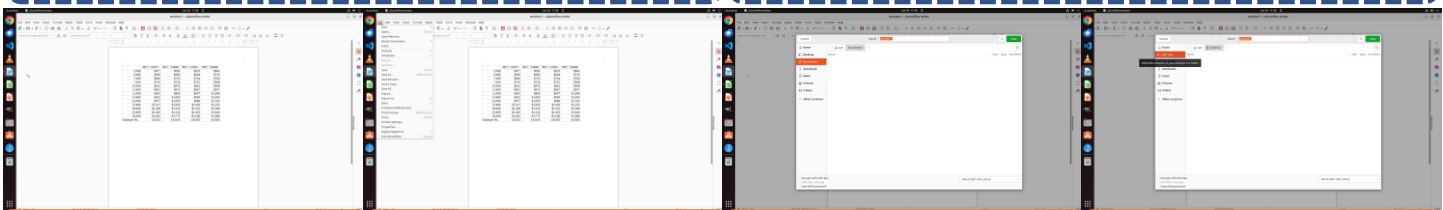

Structured Chain-of-Thought (Structured CoT)

[Observation] The File menu is open again, with \"Save As...\" visible.

[Plan] 1) Click Save As to open the dialog. 2) Click Desktop in the left sidebar. 3) Enter \"price.docx\" as the filename. 4) Click Save.

[Reasoning] Reopening the Save As dialog lets me set the Desktop location before entering the filename.

[Expected] The Save As dialog will open.

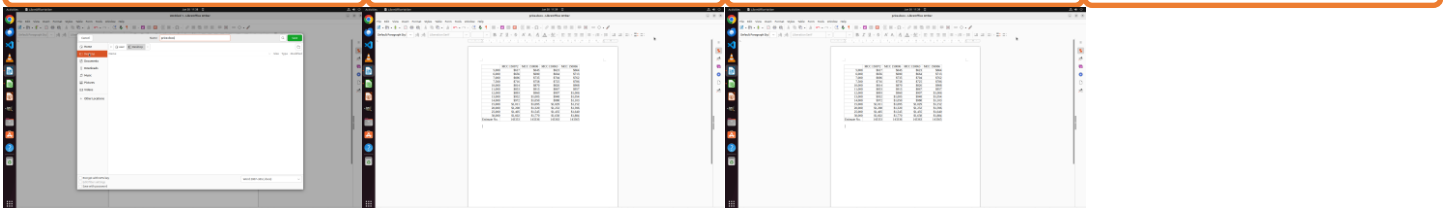

Action: typewrite('price.docx', interval=0.03)

Action: click(82, 71)

Action: click(123, 350)

Action: click(453, 242)

Action: typewrite('price.docx', interval=0.03)

Action: click(1545, 156)

Action: DONE
