

Prompt

Visualize the phenomenon of the lifecycle of a frog from seed to mature organism. Output each image together with a concise text caption

Planner

Stage 1: The lifecycle begins with a cluster of gelatinous eggs, known as frogspawn

Generator

Critic

<think>The generated image successfully fulfills all the requirements of the original user instruction. It is a high-quality, ultra-realistic macro photograph of frogspawn...</think><answer>{"success": true, >{"refined_prompt": ""}</answer>

Planner

Stage 2: A tadpole hatches from the egg. It lives in water, breathes with gills, and has a tail for swimming.

Generator

Critic

<think>The generated image successfully replaced the frogspawn with an amphibian larv. However, the generated creature is not a classic tadpole.</think><answer>{"success": false, "Refine Prompt": "A realistic underwater macro photograph of a single, classic frog tadpole swimming in.... The focus is sharp on the tadpole."}</answer>

Generator

Critic

<think>The edited image is an excellent execution of the rewritten prompt. \n\n1. **Intent Matching (Criterion A):...</think><answer>{"success": true, >{"refined_prompt": ""}</answer>

Planner

Stage 3: The tadpole grows legs and its body changes, becoming a froglet. It still has a tail, but is beginning its transition to land.

Generator

Critic

<think>The edited image successfully fulfills all requirements of the user's instruction...Crucially, it accurately displays both newly formed hind legs and the residual tadpole tail, which was the core of the transformation...</think><answer>{"success": true, >{"refined_prompt": ""}</answer>

Planner

Stage 4: The fully developed adult frog has no tail, breathes with lungs, and can live on land as well as in water, ready to reproduce and start the cycle anew.

Generator

Critic

<think>The user's instruction was to generate an image of a 'mature, vibrant green frog.'...The resulting image still depicts an immature frog with a tadpole tail. This is a significant biological error...</think><answer>{"success": false, >{"refined_prompt": "A stunning, ultra-detailed wildlife photograph of a single, fully mature, vibrant green frog with no tail. The frog is the central focus, perched alertly on a dark, wet, mossy log at the edge of a serene pond....}</answer>

Generator

Critic

<think>The prompt explicitly requested a \"fully mature, vibrant green frog with no tail.\" ... **Anomaly & Logic Detection:** The edit is seamless. There are no anatomical errors...</think><answer>{"success": true, >{"refined_prompt": ""}</answer>
