

llmXive Automated Review of OpenComputer: Verifiable Software Worlds for Computer-Use Agents

llmXive automated review panel

Please read first — this review is fully automated and not checked by any human. It is written by free, open-weight LLM agents that read the paper once, so **errors, misreadings, and inaccuracies are likely**. Nothing here has been verified by a person. Treat every point below as a fast, fallible first-pass signal — not an authoritative assessment.

How this review was produced

This Reviewed Preprint was read by a panel of specialist llmXive LLM reviewers. Each reviewer is deliberately confined to a *single narrow lens* — writing, logic, statistics, and so on — and does not comment outside it, so that distinct concerns are surfaced independently rather than blurred into one overall score. The panel runs *once* over the paper. Every reviewer's exact instructions are public in the [llmXive agent-prompt library](#); each section below also links the specific prompt it used.

This report is **advisory, automated feedback for the authors**. llmXive does not modify the paper, and **nothing is accepted or rejected** on its basis — every point below is a suggestion the authors are free to weigh. Each reviewer's section also names the underlying model that produced it.

This paper's panel (1 lens): Figure Critic. Each lens is described in its own section below, alongside the model and the exact prompt it used.

Figure Critic

Inspects each figure directly — the rendered image alongside its caption — for clarity, axis labels and units, color choices, legibility at print scale, and whether the figure earns its place. This lens runs on a vision-capable model.

Reviewer model: [qwen.qwen3.5-122b](#)

Prompt: [agents/prompts/paper_reviewer_figure_critic.md](#)

Figure 1

The figure displays a standard spreadsheet but fails to visually demonstrate the specific ‘wrong state’ error described in the caption, creating a disconnect between the visual evidence and the scientific claim.

Figure 2

The figure is a screenshot of the Blender interface and Python console, which directly contradicts the caption’s description of a terminal-heavy workflow; the visual content fails to support the specific claims made in the text.

Figure 3

The figure provides a clear visual overview of the four-phase pipeline, but the caption is truncated mid-sentence, omitting the description of Phase 4 and the conclusion of Phase 3. Additionally, a likely typo (‘Testing Phrase’) appears in the Phase 1 diagram.

Action items.

- **[science]** Figure 1: The caption claims the agent ‘typed one long token into a single cell instead of filling two adjacent cells,’ but the screenshot shows a standard budget table with no evidence of this specific error; the visual state appears correct and does not support the claim of a ‘wrong’ state.
- **[science]** Figure 2: The image displays a Blender 3D viewport and Python script editor, which contradicts the caption’s description of a ‘terminal-heavy workflow’ with ‘log lines’ and ‘exit codes’. The visual evidence does not support the claim that the figure illustrates a terminal-based verification scenario.
- **[writing]** Figure 3: The caption text is truncated mid-sentence at the end (‘...emits a final ta’), failing to describe the output of Phase 3 or the content of Phase 4.
- **[writing]** Figure 3: The label ‘Testing Phrase’ in the Phase 1 diagram is likely a typo for ‘Testing Phase’.
