

Cross-Embodiment Data Curriculum for Native Pretraining

Learn the **mechanical characteristics** of robot bodies and interaction data during real physical environment operation

Robot Actions

Robot Data

Human actions, intentions, goals, and interaction behaviors with external objects in specific environments

Human Behaviors

Structured Data

The **foundation of understanding and cognition**: describing the basic operating mechanisms and causal laws of nature

Physical Laws

Chain-of-Thought Text

Reasoning:

An apple is pulled downward by gravity, while its stem provides an upward tensile force to maintain equilibrium. As the fruit ripens, the stem weakens. When gravity exceeds its load-bearing limit, the stem breaks and reaches the critical failure point. Once detached, the apple is only acted upon by gravity and accelerates downward in accordance with Newton's Second Law.
