

Steps: 28 (Optimal: 24, Eff: 0.86)

1 Step 1:

Moving forward East is the most direct initial step to progress towards the goal's x-coordinate, and there is a clear corridor ahead.

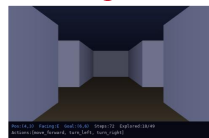

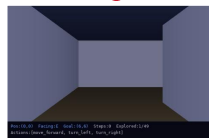

2 Step 9:

There's a long clear corridor ahead in the South direction. Moving South will increase my y -coordinate significantly, bringing me much closer to the goal.

3 Step 28:

The goal is at (6,6) which is directly ahead in the East direction. Moving forward will take me to the goal cell, completing the maze.

Steps: 96 / 96 (failed, Eff: 0.00)

1 Step 1:

I'm at (0,0) facing East. I can see a corridor ahead with a wall directly in front. The goal is at (6,6) in the bottom-right corner.

2 Step 25:

I'm at (6,4) with East blocked. I need to get to (6,6). Let me turn right to face South and see if there's a path around.

3 Step 73:

I'm at $(4,3)$ facing East. Moving forward.
